

Quiz 2- First model

The quiz consists of two pages; all questions must be attempted.

Q1: Choose the answer that best completes the statement by selecting a, b, c, or d, then record your answer in the provided answer table. (5 marks, 0.5 for each)

1. In what case could a pregnant woman ethically participate in clinical research?	
a. Always, with signed consent	b. If the risk to the fetus is minimal
c. Only in therapeutic studies	d. If fetal abnormalities are present
2. is a mandatory element of the informed consent.	
a- Voluntary	b- Termination
c- Consequences of withdrawal	d- Additional Costs
3. is one of the qualitative risk assessments.	
a- Decision analysis	b- MCDA
c- Cultural Considerations	d- Risk matrices
4. The primary purpose of informed consent in a clinical study is	
a- To meet legal documentation requirements	b- To reduce study costs
c- To get the ethical approval	d- To maintain the research integrity
5. The exempt IRB review is considered in case of	
a- Using vulnerable subjects	b- Less than minimal risk
c- Minimal risk	d- More than minimal risk
6. Which of the following types of research is <u>NOT</u> reviewed by an IRB?	
a- Human subjects	b- Animal study
c- Biological fluids	d- Embryo
7. Providing the appropriate shelter is mandatory for animals to ensure freedom from	
a- Hunger	b- Fear
c- Discomfort	d- Disease
8. Which study best exemplifies all three 3Rs in animal research?	
a- Using 100 mice with minimal discomfort for a cancer drug trial	b- Repeating a successful trial on a different animal species
c- Replacing rodents with organoids, smaller group sizes, and using analgesics	d- Using animals without anesthesia for more accurate behavioral observation
9. What is essential to maintain cell culture integrity?	
a- Sterilization	b- Genetic modification
c- Cell origin	d- Biosafety measures

10. One of the responsibilities of IRB is minimizing side effects to participants, it is known as.....	
a- Protect participants	b- Risk-Benefit Assessment
c- Evaluate Informed Consent	d- Protocol Approval

Second model

1. The primary purpose h is	
a- To meet legal documentation requirements	b- To protect participants' autonomy
c- To speed up the research process	d- To reduce study costs
2. Which of the following best illustrates refinement in animal research?	
a- Using healthy animals instead of sick ones	b- Avoiding sedation to observe pain responses
c- Switching to less invasive procedures	d- Using larger cages to reduce aggression
3. Paternal and maternal consent is ethically required in case of	
a- High-risk non-therapeutic maternal research	b- High-risk non-therapeutic fetal research
c- Low-risk therapeutic maternal research	d- High-risk therapeutic fetal research
4. Which is NOT a biosafety concern in <i>in vitro</i> research?	
a- Contamination	b- Cell origin
c- Hazardous chemicals	d- Environmental release
5. One of the responsibilities of IRB is ensuring ethical research practices and respectful study procedures, it is known as	
a- Protect participants	b- Risk-Benefit Assessment
c- Evaluate Informed Consent	d- Protocol Approval
6. Providing treatment to avoid mental suffering is mandatory for animals to ensure	
a- Hunger	b- Distress
c- Normal behavior	d- Thirst
7. is an additional element of informed consent.	
a- Purpose	b- Confidentiality
c- Benefits	d- Number of Subjects
8. The expedited IRB review is considered in case of	
a- Using vulnerable subjects	b- Less than minimal risk
c- Minimal risk	d- More than minimal risk
9..... is one of the quantitative risk assessments.	
a- Case Studies	b- Expert Review

c- Stakeholder interview	d- MCDA
10. If an IRB has members all from the same medical specialty, the board is likely to be.....	
a- A legally valid but more efficient	b- Ethically insufficient
c- Ethical since they are experts	d- The best, as they focus on technical errors
